Hiring Team
Yocale Network Corporation
North Vancouver, BC

Dear Yocale Hiring Team,

I am excited to apply for the Quality Assurance Engineer role at Yocale in North Vancouver. With over 6 years of experience designing test automation frameworks, validating web and mobile applications, and streamlining release verification for SaaS products, I would love to help scale quality across Yocale's business management and online scheduling platform.

Throughout my career, I have architected maintainable UI and API test automation frameworks using Playwright, TypeScript, Selenium, and Postman. At Plato, I led the development of a Playwright automation framework that significantly accelerated regression test coverage. In previous roles at ESDC and AMD Silo AI, I created reusable end-to-end test suites, cut manual testing effort by over 45%, and integrated test pipelines into GitHub Actions to support regular production deployments.

I admire how Yocale empowers appointment-based businesses through integrated scheduling, point-of-sale payments, automated client flows, and business reporting. Testing user-facing workflows across web and mobile interfaces to ensure fast, reliable booking and billing experiences is exactly the kind of SaaS product challenge I enjoy owning.

My approach to quality engineering combines systematic test planning, thorough root-cause analysis for reported bugs, and close collaboration with product managers and developers. I take pride in creating clear, well-documented defect reports in Jira, verifying production releases, and mentoring team members on test automation best practices.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my test automation and SaaS quality engineering background can contribute to Yocale's continued growth.

Sincerely,

Akash Vashista
